

Summary version :

Student Problems

1. Fragmented Communication

Students must check multiple platforms like ERP, WhatsApp, Messenger, and Google Classroom for updates.

2. Lost Academic Resources

Important notices, PDFs, and lecture materials get buried in chat history.

3. Manual Class Tests & Exams

Class tests and exams are still conducted manually using traditional paper-based methods.

4. No Real-Time Academic Visibility

Students cannot see attendance, marks, GPA, or transcript in real time.

5. Delayed Result Publishing

Students often need to wait until the semester ends to see final academic performance.

6. Dependency on Academic Office

For transcripts, results, or academic queries, students often need to visit academic offices physically.

7. Limited Faculty Access

There is no centralized platform to easily communicate with faculty members.

Faculty Problems

1. Manual Attendance Taking

Faculty still take attendance manually using paper or spreadsheets.

2. Manual Question Preparation

Quiz, class test, and exam question papers are prepared manually.

3. Manual Exam Evaluation

Faculty must check answer scripts manually, which is time-consuming.

4. Manual Grading Process

Marks, attendance scores, and final grades are calculated manually.

5. Lengthy Result Publishing

After evaluation, faculty must prepare result sheets and publish them manually.

6. Scattered Communication

Faculty communicate through multiple disconnected platforms, causing inefficiency.

7. Administrative Overload

Too much time is spent on repetitive tasks instead of teaching and mentoring.

Admin Problems

1. No Real-Time Semester Visibility

Admins often do not know what is happening during the semester until it ends.

2. Difficult Monitoring

Tracking attendance, assessments, and academic progress across departments is challenging.

3. Delayed Issue Detection

Problems like poor attendance or academic delays are identified too late.

4. Manual Report Collection

Reports require collecting data from faculty, departments, and multiple systems manually.

5. Limited Operational Control

Admins struggle to ensure all academic processes run efficiently across the university.

Detailed version :

Student Problems

1. Scattered Communication Across Multiple Platforms

Students receive academic information through many disconnected platforms such as:

- University ERP
- WhatsApp groups
- Messenger groups
- [Google Classroom](#)

Because communication happens in multiple places, students must constantly switch between platforms to stay updated.

2. Important Messages Get Lost in Chat Groups

Class representatives (CRs) often create WhatsApp or Messenger groups for each section.

Faculty members share:

- Notices
- Lecture materials
- PDFs
- Assignment instructions
- Exam-related updates

As daily conversations continue, hundreds of messages accumulate. Important files and announcements quickly disappear in chat history.

As a result:

- Students waste time scrolling through old messages
 - Important resources become difficult to find
 - Sometimes files are lost completely
-

3. Difficulty Managing Multiple Courses in Google Classroom

A student typically enrolls in multiple courses each semester.

For every course, they may need to join separate Google Classrooms containing:

- Lecture slides
- Assignments
- Announcements
- Study resources

When students need a specific file later, they must:

1. Remember which course it belongs to
2. Open that classroom
3. Search through posts manually

This becomes increasingly frustrating as the number of courses grows.

4. No Centralized Communication with Faculty

Students often struggle to contact instructors directly for academic questions.

There is no unified system where students can:

- Ask questions easily
- Receive quick responses
- Track communication history

Important announcements may also be missed if students do not check chat groups at the right time.

5. Delayed Access to Academic Information

Students often have to wait to receive:

- Assignment results
- Quiz scores
- Attendance status
- Grade updates
- Academic notices

This lack of real-time visibility creates uncertainty and delays.

6. Manual Administrative Processes

For many administrative queries, students must physically visit academic offices.

Common problems include:

- Standing in long queues
- Waiting for manual responses
- Wasting time for simple information requests

Many of these processes could be digitally accessible.

Faculty Problems

1. Manual Attendance Management

Many faculty members still track attendance using:

- Paper records
- Excel spreadsheets
- Manual calculations

This process is:

- Time-consuming
 - Error-prone
 - Difficult to manage for large classes
-

2. Manual Assessment Preparation

Faculty members often prepare academic assessments manually, including:

- Quiz questions
- Class tests
- Assignments
- Exams

Managing these across multiple sections increases workload significantly.

3. Inefficient Assignment Submission and Evaluation

Assignments are commonly collected through [Google Classroom](#).

Faculty members usually need to:

1. Download each submission manually
2. Review assignments individually
3. Assign marks manually
4. Calculate grades
5. Prepare result sheets
6. Generate PDFs
7. Redistribute results to students

This workflow is repetitive and inefficient.

4. Fragmented Communication with Students

Faculty members communicate using multiple channels such as:

- ERP
- WhatsApp
- Messenger
- Google Classroom
- Email

Because communication is fragmented:

- Important notices may not reach all students
 - Tracking previous discussions becomes difficult
 - Communication becomes inefficient
-

5. Increased Administrative Burden

A significant portion of faculty time is spent on repetitive administrative tasks instead of teaching and mentoring.

Examples include:

- Attendance tracking
- Result preparation
- File management
- Student communication
- Notice distribution

These repetitive tasks reduce productivity.

Core Problem Statement (Combined)

Overall, both students and faculty suffer because academic activities are spread across multiple disconnected systems.

Current systems rely on:

- ERP platforms
- WhatsApp / Messenger groups
- [Google Classroom](#)
- Excel sheets
- Paper-based records
- Physical offices

This fragmentation creates:

- Inefficiency
- Delays
- Communication gaps
- Poor resource management
- Increased manual workload

ain Point → “Why we need one intelligent platform?”

That flow usually feels very professional.
